

## The Kayak: *you must hear it to believe it*

**"...the Role Audio Kayaks best the LS 3/5as quite nearly across the board. When we consider that the final version of the BBC monitor was priced at almost \$1500 the amazing value of the Kayak is fully understood.... the Superior posts are truly the finest posts available... the Kayak is impressively designed, assembled & outfitted."  
(M.L. Gneier, tnt-audio.com, May 2001)**

The Kayak is a tiny minimonitor that offers an extremely high level of performance for its size. Its first order, minimum phase, point source, acoustic suspension design gives it excellent time coherence, transient response, and bass response. Its soundstaging and imaging performance are unparalleled. And its ability to replay the nuances and ambiance of music makes it reveal subtleties that most high price loudspeakers gloss over.

The Kayak is magnetically shielded and full range. And it is designed for use in high-end stereo, home theater, and background music systems. It is available finished in satin black lacquer, real birch hardwood, and custom finishes.
